Cañariaco Sur & Quebrada Verde

- Cañariaco Sur** lies 1.3km south of the centre of the Cañariaco Norte deposit and has an initial Inferred Resource
- Quebrada Verde:** Extensive Cu-Au-Mo soil anomalies, coincident IP and Mag, Cu mineralization in creek beds
- All 3 Cu systems within 4km trend** – allows for shared infrastructure

Canyon Creek – BC, Canada

- Located ~160km from the Red Chris Mine
- Covers a large copper-molybdenum-silver anomaly delineated by regional stream sediment survey
- Also covers large areas with anomalous levels of copper and molybdenum in soils over 5km by 2km and is open
- Prospecting has identified two zones of mineralization, with grades up to 1.56% Cu, 0.1% Mo and 17.6 gpt Ag
